

Class AreaCalculator

java.lang.Object
AreaCalculator

```
public class AreaCalculator
extends Object
```

Purpose: Provides utility methods for geometric area calculations. Author: Gautham Krishnamurthy Date: May 2, 2026

Method Details

calculateRectangleArea

```
public double calculateRectangleArea(double length,  
                                   double width)
```

Calculates the area of a rectangle based on its length and width.

Parameters:

length - The vertical or horizontal extent of the rectangle (double).

width - The horizontal or vertical extent of the rectangle (double).

Returns:

The total area as a product of length and width (double).
